Software Development Engineer

Job Description

Participate as a member of a skilled and creative product development team designing, developing and delivering the next generation of Enterprise Project Management Applications. With a strong foundation in computer programming, and strong competencies in data structures and software design, candidate will be responsible for refining and implementing functional requirements: scoping, detailed design, effort estimation, hands-on development, testing, debugging, maintenance and support. Participate in all aspects of an iterative software development process including design, coding and reviews using Object Oriented Design and Programming, UML, Agile Software Development, C#.NET, WPF/Silverlight and XAML, ASP.NET Web Services, SQL Server, MVVM, LINQ, Multi-layer Software Architecture, Multi-threading, VisualBasic for Applications.

Education

Bachelor degree in Computer Science or related field

Experience

1 – 2 years developing Enterprise custom development applications using C# and WPF.
Proven track record in software development

This position is located in Austin, TX. Relocation assistance will not be considered for this position.
